## STATUS OF THE LEGAL METROLOGY IN SPAIN

***\*\* (We don't have significant change since last year) \*\****

- All EU Directives implemented in the Spanish legislation
- Insufficient market inspection from local governments to stop using instruments not fulfilling the EC legislation on regulated uses mainly in industries and street markets / small shops.
- Periodically reverification legally implemented for in service NAWI weighing instruments but only active in supermarkets, postal and vehicle scales. Also for AWI weighing instruments used for pre-packed goods in the Food industry and to control weight & volume in parcel logistics.

***Scale manufacturers are excluded from performing reverification due to extremely restrictive legal regulation.***
