UKWF Metrology Certificate and UKWF Apprentice Metrology Diploma

October 2025

UKWF Metrology Certificate

UKWF Metrology Certificate Training Course

- To-date, we have now trained **41** Delegates from the UKWF's members, and they all successfully completed the Metrology Training!
- As a reminder, the Metrology Training Course is open to all UKWF members. It is very effective for new people into our industry, but equally applicable to long standing employees looking for a broader or deeper understanding of weighing.
- We struggled to get enough delegates for the last 2 courses

UKWF Metrology Certificate Training Course

- So, we are going to change the way it works.
- Chris is going to provide a “waiting list” for potential delegates – they simply register
- Once we have enough delegates to make it viable, we will contact all of those interested parties and arrange a agreeable date for the training!
- But that is not all

UKWF Metrology Certificate Training Modules – NEW!!!!

- As the UKWF now has plenty of training material, we are considering offering Metrology Training Modules – one day per module.
- Examples we are considering are:
 - Dummies Guide to the World of Weighing
 - Weighbridge day
 - Fault finding practical day
 - EPOS Basics
 - Average weight/package goods
 - Quality Management Systems
- Likely to be around £300 per day
- If larger companies or groups of smaller companies want on-site training, we could consider this

UKWF Apprentice Metrology Diploma

UKWF Apprentice Metrology Diploma

- We now have a cohort of 4 delegates who are confirmed at £5,000 per delegate
- This covers 18 days of Luton based training over a 6 months period (£278 per day)
- We were asked to move the dates, so it didn't interfere with their normal Apprenticeship college training – so we accommodating this
- This is the final call for any other apprentice delegates this month as we will close this off first week of November and start to finalise dates and venues
- We will endeavour to split the invoices over two financial years for the companies involved
- Eight years in the planning and now we are about to start the historic UKWF Apprentice Metrology Diploma!!!
